### 1) Backend Development for Adopt Page

In our website, one of the main features allows users to adopt pets through a simple form. I made the backend development of these adoption pages using PHP. Additionally, I created the necessary databases and tables using MySQL to support the functionality of these pages.

### 2) Backend Development for Donation Page

This is another critical feature of our website where users can make donations to support the future of pets. I managed the backend aspects of this donation form. We collect personal information and payment details from donors and store them securely to ensure their safety.

### 3) Final Project Report

The final project report was a collaborative effort in which I actively participated.
